WizFi250 Evaluation Board Schematic

Here you can find all schematics and PCB layout data for the WizFi250-EVB and the WizFi250-H Interface adapter. On the EVB we use two 2×11 pin **50mil pitch** socket and pin headers to make the WizFi250 removable. We put the SMD type WizFi250 module on a Interface adapter board (that is than named WizFi250-H).

The pin headers have a **distance** of exactly **17mm**.
